

SAN DIEGO INSTITUTE OF TECHNOLOGY • THE CURRICULUM

The Nine Laws of Course Design

Use science to make your art better. Use art to make your science better.

I The Founder's Test

Would the founder genuinely want to take this course? If not, redesign or cut.

II The Dual Register

Keep the names, transform the delivery. The catalog says Calculus I; the classroom is the ocean, the ramp, the studio.

III Physical Before Formal

No concept arrives as notation first. Force is a bottom turn before it is a vector.

IV The Double Feature

Ideas travel in company — a text, a film, an album, discussed as one conversation. Media embedded, never linked away.

V It Ends in a Made Thing

Every course closes with an artifact, defended or exhibited. Understanding is only completed in the making.

VI A Day Looks Easy

One idea, one thing to experience, one question — done in minutes. Depth waits behind optional doors. Overwhelm is a design failure.

VII AI-Native, Not AI-Dependent

The tools stay open in every course — and the human is regularly examined unaided.

VIII Open to Everyone

Every course published in full, free, to anyone on Earth, without asking permission — and readable without an account. Non-negotiable and permanent.

IX Day by Day, or It Doesn't Ship

A syllabus is a promise; the daily path is the course. Nothing is called live until a learner knows exactly what to do each day.

EVERY COURSE SERVES THE FIVE OUTCOMES —
JUDGMENT • COMMAND OF INTELLIGENCE • CRAFT • ARTICULATION • BREADTH OF MIND
